

Enhanced Bioavailability

We utilize the latest in cutting edge nanotechnology to increase maximum absorption and bioavailability. We've developed a proprietary **Smart Carbon Oligosaccharide Nanoparticle Delivery System (SCONDS™)**.

At some point in time you may have encountered the belief that supplemental ingredients are too difficult for the body to absorb, and therefore of little use. And to be fair, there is some truth there; nutrients do have to be absorbed in order to be useful. To make natural compounds of any type more effective and consistent, they may require an extra boost.

That's where our proprietary Smart Carbon Oligosaccharide Nanoparticle Delivery System (SCONDS™) comes in. It allows the escort of ingredients through intestinal walls for better absorption, enhanced stability and bioavailability. In other words, a type of "**programmed packaging**".

This advanced technology acts as a nanoparticle molecular container that surrounds other compounds until they are ready to be released directly into the cell.

This process also naturally increases the shelf life of raw material. These nanocavities are stable core-shell nanoparticle encapsulated molecules which allow for the controlled release and direct cellular delivery of natural biomolecules over time, further increasing their beneficial effectiveness.

Benefits may include:

- **Nanoencapsulated aquaceutical delivery**
 - **Amplified absorption**
 - **Increased bioavailability**
 - **Heightened bioactivity**
 - **Enhanced molecular stability**
 - **Advanced particle distribution**
 - **Cutting-edge controlled release**
 - **Extended shelf life**

These naturally occurring compounds encapsulate and preserve active compounds, which allows them to act as nanoparticle molecular containers that surround other compounds until they are ready to be released. This process also naturally increases the shelf life of raw material.

These glyconanocavities are stable core-shell nanoparticle encapsulated molecules which allow for the controlled release and direct cellular delivery of natural biomolecules over time, further increasing their beneficial effectiveness.

Our products combine hand selected ingredients, with advanced nanotechnology to create a powerful, yet gentle solutions that can be used to enhance total body wellness. We believe in the power of natural healing and are committed to providing the highest quality of care to our customers.
